

# Cystic

# Fibrosis invisible. But not invincible

## 40

Around half of people with cystic fibrosis will not live to celebrate their 40th birthday.

You can't catch cystic fibrosis – it's a genetic condition you're born with – and there's currently no cure.

More than two million people carry the faulty gene that causes cystic fibrosis, most without knowing it.

With your help we can develop better treatments to stop cystic fibrosis in its tracks.
