Will the altitude affect me? Altitude sickness can occur at heights over 2,500m above sea level, although the more severe symptoms of altitude sickness only tend to occur at altitudes of 3,600m and above. Your physical fitness will not affect your ability to cope with altitude, but the fitter you are the better you will cope whilst in the mountains. Altitude sickness is caused by decreased oxygen concentration in the blood due to the lower atmospheric pressure at altitude. All individuals are affected differently, but symptoms can include breathlessness, nausea and headaches. Please be assured that this trek has been designed to maximise your chances for sufficient acclimatisation i.e. the speed at which we trek, the route taken and the number of highly trained experts in the support team.
