UK CF Registry Annual Data Report 2015
At a glance

Our ‘at a glance’ version of the UK CF Registry Annual Data Report 2015 highlights the key information from the full report, available at www.cysticfibrosis.org.uk/registry.

The map above shows the percentage of people with CF in each of the devolved nations with at least one copy of the G551D mutation, known as a genotype.

Genotypes by devolved nation

- G551D
- Scotland: 10%
- Northern Ireland: 8%
- England: 5%
- Wales: 3%

Genotype completeness

98% have complete genotype data.

The UK CF population

10,810 is the number of people living with CF in the UK. This is 227 more than in 2014.

Nontuberculous mycobacteria

Prevalence has decreased from 6.2% in 2014 to 5.6% in 2015.
26 days was the median age of diagnosis for people with CF under 16 in 2015.

Median predicted survival is 47 years old is the median predicted survival based on 2013–2015 data.

42 lung transplants were carried out in 2015 compared to 59 in 2014.

64 women with cystic fibrosis had a live birth in 2015.

Chronic Pseudomonas has reduced by 15.2% in people with CF aged 16–19 since 2008.

Median predicted survival is 5.3 years lower in females than males with CF, based on 2013–2015 data.

42 women with cystic fibrosis had a live birth in 2015.
